

Climate change mitigation in the wine sector: sustainable practices in vineyard and winery.

LIFE CLIMAWIN stands climate change by involving the **wine sector** in its mitigation, including emissions reduction, carbon use and capture, sustainable land use and avoidance of fossil fuels and fluorinated gases.

www.lifeclimawin.eu

OBJECTIVES

Assessing the impact of land use changes on mitigation potential

Implementing a microgrid to increase the renewable fraction

Increasing soil organic C sequestration through sustainable practices

Identifying and promoting the most efficient mitigation measures

Reducing fluorinated gases with sustainable refrigeration techniques

Showcasing the wine sector as a model against climate change
